what is class and object?

- class : blueprint of object
- object : instance of class

contain in class

- data members : variable that live in class
- function members or method : function that live in class
- Access modifier:
 - private
 - protected
 - public
- Constructor : function that has the same name to class, auto call when create object
 - default constructor
 - constructor with parameter
- properties
 - getter: function that get value of private data members
 - setter: function that set value to private data members
- this keyword : call instance object

```
example: this->x = 10;
```
